## IN A NUTSHELL

I'm a seasoned full-stack web developer who specializes in building high-quality user experiences with custom JavaScript, HTML, and CSS.

---

---

**I have been building on the web since 1997**, honing a wide array of skills that serve me well on projects with tricky requirements. I excel at filling in the blanks, delivering solutions that delight my customers by making their ideas become a real thing.

**And my background in graphic design** ensures everything I make looks clean sharp, and professional. I sweat the details.

---

---

## JH WEB DEVELOPMENT

Freelance Web Developer // November 2021–Present

(1) Angular development for the *Department of Defense* (2) WordPress development for *Avery Weigh-Tronix*, an industrial weighing solutions provider (3) Cordova development for *1517 Media*, a children's book publisher (4) mobile design consulting for a popular YouTube streamer

## TRIPPOINT SOLUTIONS

Senior Web Developer // September 2019–November 2021

(1) Developed an Angular-based single-page app (SPA) used by the *US Army Corps. of Engineers* for initiating and managing construction projects (2) Built an automated data warehousing mechanism with MSSQL server for use in a web service API (3) Built that web service API using .NET and C# to deliver projection information to the Angular website in JSON format

## BLUE EARTH INNOVATION

Web Developer // February 2016–July 2019

(1) Developed an Angular-based web app for e-books containing rich interactivity, such as highlighting selected text passages, recording audio/video annotations using the MediaRecorder API, audio read-aloud with variable-speed playback controls, light and dark viewing modes, social interaction with threaded replies, customizable font family/size settings, and more (2) Integrated *Synchrony Bank* (on-site credit application/approval) as a payment option for *Octane Fitness*, a premier maker of elliptical bikes (3) Made several mobile apps using the Ionic v1 framework (AngularJS) and Cordova
